

DILLORA BY KASHVIN

Business Owner's Guide

How to run your online store, day to day

A simple, non-technical handbook

Welcome

This guide explains how to run your Dillora store **without needing any coding**. Everything about your shop — products, prices, orders, offers and pop-ups — is managed from one simple website called the **Admin Dashboard**. If you can use Instagram, you can run this.

Your two websites

Your business has two web addresses:

The Store	dillora-kashvin.vercel.app — what your customers see and buy from.
The Admin Dashboard	dillora-kashvin-admin-dashboard.vercel.app — your private control panel. Log in with your email and password.

Keep your admin password private. If you ever change it, write it down somewhere safe.

The daily routine

Log into the Admin Dashboard and do this each day:

- **Overview** — a quick glance at today's revenue, number of orders and low-stock items.
- **Orders** — see new orders. Open one to view the customer, items and address.
- Update each order's **status** as it progresses: Processing -> Shipped -> Delivered.
- For **Cash on Delivery** or advance orders, tap **“Mark balance collected”** once you receive the money.
- Handle any **cancellation requests** (approve or reject).

Managing your products

Go to **Products** to add or edit anything you sell.

- **Add product** — name, price, category, description and photos.
- **Stock** — the quantity available. When it runs low it shows on the Overview.
- **Lock a product** — stops its stock being edited by mistake (useful for staff).
- **Colours / Variants** — under **Variants**, add the colours a t-shirt or crochet item comes in. Customers then pick the colour from a drop-down on the product page.
- **Pair It With** — suggest related items (e.g. a charm with a cover) shown as “You may also like”.

Phone brands & models

Under **Phone Brands & Models** you manage the brand and model list customers choose from when buying a phone cover (Apple, Samsung, OnePlus, and so on).

- Add a brand's **logo**.

- **Bulk import models** — paste a list of models, one per line, to add many at once.

Promotions & marketing

You can run all your marketing yourself, from the dashboard:

Coupons	Discount codes (e.g. WELCOME10). Set the code, discount and expiry.
Offers	Automatic deals like “Buy 2 Get 1 Free” — applied at checkout without a code.
Promo Banners	The big colourful banner on the home page (title, offer, button, countdown).
Pop-ups	Welcome pop-up (first visit), How-to-Order steps, and a Promotion pop-up.
Countdown bar	The “Sale ends in...” strip at the very top of the store.
Homepage Hero	The large banner image + headline at the top of the store.

Tip: keep a coupon code and its pop-up consistent — if the pop-up shows “Use code DILLORA10”, make sure that coupon actually exists under Coupons.

Reviews & customer feedback

- **Reviews** — customers rate products. You can approve, hide or reply to them.
- **Feedback** — a “How was your experience?” pop-up after delivery. Approved feedback appears as testimonials on the store.
- **Review reward** — automatically gives a discount coupon to customers who leave a review (you can turn this on/off).

Talking to customers on WhatsApp

Your WhatsApp number powers three things: the floating green button on the store, the “Confirm order on WhatsApp” link after checkout, and the “Customise on WhatsApp” button on product pages. Set it once under **Settings**. Your current number is **9004779954**.

How you get paid

Pay online	Full payment now via Razorpay (UPI, cards, net-banking, wallets). Money settles to your bank.
Half online + COD	Customer pays 50% now to reserve a customised item, rest on delivery.
Cash on Delivery	Customer pays the full amount in cash on delivery. Offered only for mobile-cover orders.

Cancellations & refunds: cover orders can be cancelled within 48 hours. When you approve a cancellation, stock is restored automatically and you mark the refund as processed once you've sent the money back.

Invoices are generated automatically for every order (under **Invoices**) and can be emailed or downloaded as a PDF.

Store settings

Under **Settings** you control the bits customers read: estimated delivery days, return policy, packaging & quality info, your Instagram link, WhatsApp number, GST details for invoices, and the homepage hero.

Your monthly checklist

- Fulfil and update the status of every order.
- Restock low products; lock ones you don't want changed.
- Refresh a promotion — a new coupon, banner or pop-up keeps the store lively.
- Approve new reviews and feedback.
- Check that your Razorpay payouts are arriving in your bank.
- Reply to WhatsApp enquiries.

What belongs to you (your accounts)

These online accounts should be in **your** name — they hold your data and your money:

MongoDB Atlas	Your store's database (products, orders, customers).
Cloudinary	Where your product/banner images are stored.
Razorpay	Collects payments into your bank (needs your KYC).
Domain name	Your web address, if you buy a custom one.
Email (SMTP)	The address invoices and alerts are sent from.

Keep the login details for all of these safe. Your developer needs them to set things up, but the accounts themselves are yours.
